

THASANEE PUTTAMADILOK

Houston, TX | (972) 664-4779 | thasanee.dev@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years designing and building full-stack features that integrate AI/ML capabilities into production web applications. Expert in developing scalable frontend experiences using modern React-based frameworks, collaborating with backend teams to integrate APIs and data pipelines, and improving system performance across customer workflows. Proven track record deploying AI-enabled features, including LLM integrations, RAG systems, and intelligent automation. Combines hands-on technical expertise with cross-functional product leadership experience.

PROJECTS & PORTFOLIO

[StoryFlow English Learning](#) | *Vite, TypeScript, React, Claude API, TailwindCSS, Firebase*

- Built AI-powered English learning platform using Claude API for personalized story-based language instruction with adaptive difficulty levels
- Implemented real-time user progress tracking and authentication with Firebase, enabling persistent learning sessions across devices
- Designed interactive UI with React/TypeScript featuring dynamic content generation and vocabulary building through contextual storytelling

[Manufacturing Workflow UI](#) | *React, TypeScript, TailwindCSS, Zustand, React Flow*

- Engineered visual workflow builder for manufacturing processes using React Flow, enabling drag-and-drop pipeline configuration
- Implemented state management with Zustand for complex multi-step workflow orchestration, improving UI responsiveness
- Delivered as a take-home project demonstrating full-stack architecture and production-ready component design

[AI Interview Booking](#) | *Next.js, TypeScript, Prisma, Claude API, TailwindCSS*

- Developed AI-assisted interview scheduling platform integrating Claude API for intelligent candidate matching and booking automation
- Built full-stack application with Next.js and Prisma ORM, implementing type-safe database operations and server-side rendering

[AI Sleep Story Generator](#) | *Vite, TypeScript, React, OpenAI API, TailwindCSS*

- Architected AI content platform integrating OpenAI GPT-4 API serving 1,000+ users with automated sleep story generation
- Achieved sub-200ms response times with optimized React/TypeScript frontend deployed to Vercel with automated CI/CD

[SlaveVoyages – Open Source Contributor](#) | *React, TypeScript, D3.js, Leaflet, Plotly, AG Grid*

- Contributing to Rice University's digital humanities platform serving 600,000+ users, visualizing the transatlantic slave trade through interactive maps and data-driven storytelling

[RAG System & AI Stock Chatbot](#) | *Python, PostgreSQL, pgvector, Ollama, Hugging Face, OpenAI, Anthropic*

- Implemented Retrieval-Augmented Generation using PostgreSQL/pgvector, integrating Ollama and Hugging Face models to reduce API costs by 60%
- Designed conversational AI for real-time stock analysis and trading insights using Python and LLM APIs (OpenAI, Anthropic)

PROFESSIONAL EXPERIENCE

Software Engineer | Marketron, Opelika, AL

Jan 2025 – Sep 2025

- Delivered full-stack features for SaaS platform using React, Redux, TypeScript, improving system performance and reducing integration cycle time by 2 days per sprint
- Established RabbitMQ message queue for automated workflows and data pipeline orchestration, enabling scalable processing for 50+ tenants monthly
- Collaborated with backend teams to integrate REST APIs and services, aligning Rails API responses with frontend data structures
- Enhanced CI/CD pipeline with GitHub Actions, achieving 85% test coverage and reducing deployment failures by 90%
- Engineered reusable AG Grid components for data management, ensuring consistent UI behavior for sorting, filtering, and aggregation
- Maintained critical system documentation for API integration and data modeling decisions, ensuring consistent knowledge transfer

Software Engineer | Rice University, Houston, TX

May 2023 – Jul 2024

- Led full-stack development of the SlaveVoyages Historical Mapping Initiative, an interactive digital platform serving 600,000+ users visualizing the transatlantic slave trade through maps, timelines, and data-driven storytelling
- Spearheaded Vue to React/TypeScript migration, architecting reusable component library and improving developer productivity by 20%
- Built dynamic data visualizations using D3.js, Leaflet, Plotly, and AG Grid, enabling researchers and educators to explore complex historical datasets
- Optimized RESTful API integrations and map rendering performance by 25%, supporting large-scale geospatial and tabular data queries
- Collaborated with cross-functional teams of historians, data scientists, and content managers to translate research requirements into technical solutions
- Increased Jest test coverage by 30%, improving code robustness and maintainability

Software Engineer | Gigamon, Santa Clara, CA

Aug 2022 – Dec 2022

- Modernized Threat Insights UI migrating to React Hooks, accelerating feature delivery and improving maintainability
- Centralized state management with Redux Toolkit, reducing production bugs by 20% and boilerplate code by 30%
- Engineered scalable data pipeline using GraphQL/PostgreSQL, increasing throughput by 3x and enabling 2 real-time features
- Built column profile feature using Material UI, React, and TypeScript, improving user experience and system efficiency

Software Engineer & Product Owner | Level11 Consulting, Remote

Dec 2020 – Aug 2022

- Bridged technical execution with product strategy, conducting discovery sessions and leading sprint planning for cross-functional teams
- Shipped hedge fund analytics platform using React/Golang, delivering full-stack application within 3 months
- Created reusable React components and RESTful APIs, reducing processing time by 30%
- Managed \$1M annual budget while coordinating product roadmap across engineering and business stakeholders
- Modularized backend services using Golang middleware, introducing clear separation of concerns that simplified endpoint maintenance and error handling

Software Engineer | GridWhiz, Green Tech

Oct 2019 – Nov 2020

- Launched data fetching strategy using React Hooks, serving 750 requests/second, increasing component responsiveness by 40% and customer satisfaction by 15%
- Contributed to product planning and feature prioritization in an agile startup environment
- Reduced server requests by 30% by optimizing React Router for dynamic client-side routing, creating seamless navigation experience

TECHNICAL SKILLS

AI/ML: OpenAI API, Anthropic Claude API, Hugging Face, LLM Deployment, RAG Systems, pgvector, Ollama, NotebookLM, Prompt Engineering

Frontend: React, TypeScript, JavaScript (ES6+), Redux, Next.js, Vue.js, Vite, React Flow, HTML5, CSS/SCSS, TailwindCSS, D3.js, Leaflet, Plotly, Framer Motion

Backend: Node.js, Python, Go, Ruby on Rails, REST APIs, GraphQL, Prisma, RabbitMQ, Firebase, Data Pipelines

Cloud/DevOps: AWS, Azure, Docker, Vercel, CI/CD, GitHub Actions, Webpack, Vite

Databases: PostgreSQL, MongoDB, MySQL, Vector Databases (pgvector), Prisma ORM

State Management: Redux, Zustand, Context API

EDUCATION & LEADERSHIP

Bachelor of Business Administration | Ramkhamhaeng University, Bangkok, Thailand

Software Engineering Bootcamp | Codesmith

Volunteer Mentor | General Assembly Bootcamp Program

Conference Speaker | "Application Security" – Jeeny & Bractlet
